Associate Professor, Bio-Nano Research Laboratory, India

## Abstract

The management of hunger must examine the problems of accessibility, accessibility and adequacy of food provide. From associate moral perspective, this paper argues in favour of the proper to food. But, for this to become viable, the state must come back up with associate acceptable and effective bill on food and nutrition security, address the problem of inadequate provisioning of space for storing by state agencies resulting in decomposition of food grains – a criminal waste once individuals are dying of hunger; and believe native level establishments involving the community, that complement the executive structure to spot the poor and cut back exclusion and inclusion errors.

Second, even once one agrees with the norm, a additional acceptable interpretation would be that it represents the proportion of "underfed population" as a result of besides deficiencies in energy, hunger conjointly includes deficiencies in macromolecule, vitamins and minerals, among alternative things (8:9). Such associate interpretation conjointly fits in with the ultimate index being a live of hunger, not hunger. Even for the poor, the primary priority would be to fulfil a minimum energy demand to avoid starvation. But, once this is often met, there are alternative priorities in life like the tutorial needs of kids, or the immediate health desires of some relations that might take precedence over food and organic process adequacy. But, shortfalls in adequate food associated nutrition can have adverse future implications on health that may even have an intergenerational impact: the poor health of the mother being translated into poor health of the kid. Thus, not giving the fruit to Rae takes USA on the far side the domain of the proper to food to problems with inequities in health and nutrition.

## **Biography**

Michael Anjello Jothi Rajan, Ph.D., Doctorate in Physics, (Ph.D. Physics) had retired from active service on 31.05.2017 an Associate professor of Physics, Director, Bio-Nano Research Laboratory and Dean of Research in Arul Anandar College (Autonomous), Karumathur – 625514, India. He also headed the Department of Foundation Courses as an honorary member. He encourages women researchers to come up in life as India is a country where women are ill-treated and considered inferior to men. He is a popular science communicator and has started many science clubs in rural high schools in Tamil Nadu, India. He is a recipient of many awards in Physics as well as humanitarian. He has written books on Human Rights, Bioethics, Personality Development and Environmental Studies. He is in the editorial board and reviewer board for many national and international journals. He is in the Technical Advisory Committee for many International Conferences in the field of CANCER THERANOSTICS.
