

Chakras Energies Deficiencies as the Main Cause of Fatigue During Hemodialysis

Huang Wei Ling

Medical Acupuncture and Pain Management Clinic, Brazil

Abstract

Introduction: Kidney stones are mineral deposits in the renal calyces and pelvis that are found free or attached to the renal papillae. They contain crystalline and organic components and are formed when the urine becomes supersaturated with respect to a mineral. Calcium oxalate is the main constituent of most stones. Obesity, diabetes, hypertension and metabolic syndrome are considered risk factors for stone formation, which, in turn, can lead to hypertension, chronic kidney disease and end-stage renal disease. In traditional Chinese medicine, Kidney stone is related to Heat congealing turbid dampness and in diabetes patients it is related to Yin-deficiency and Heat retention.

Purpose: demonstrate that patients with kidney stones has chakra's energies deficiencies and the replenishment of these chakra's are important to reduce recurrence and prevent future formations of new stones.

Methods: though two cases reports, with recurrent formations of kidney stones since adolescences.

Results: Chakra's energy measurement was done (all rated one out of eight). The treatment consisted in Chinese dietary counseling, auricular acupuncture with apex ear bloodletting and replenishment of chakra's energy with highly diluted medications according to the theory Constitutional Homeopathy of Five Elements based on Traditional Chinese Medicine.

Biography:

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist.
