

Current progress on the nursing care research.

Maria Brenner*

Associate Professor, School of Nursing and Midwifery, Trinity College Dublin, Ireland

Keywords: Surgical critical care, Pulmonary critical care, Nursing and medicine.

Accepted on August 12, 2020

Editor Note

On behalf of the Board of the Journal of Intensive and Critical Care Nursing and my co-editors, I am glad to present the Volume 3, Issue 3 of the Journal. The Journal established in 2018 has now published 3 issues in a year. Journal of Intensive and Critical Care Nursing is constantly attracting viewers across the world. The Journal of Intensive and Critical Care Nursing aims to disseminate valuable scientific information involved in Nursing care research. Articles from the educational community contributing novel records on the field of nursing and medicine.

WHO is bringing the arena's scientists and global fitness specialists collectively to boost up the research and development system, and expand new norms and standards to incorporate the unfold of the coronavirus pandemic and help care for the ones affected. Journal of Intensive and Critical Care Nursing emerged from the vision to support the rapid and reliable publication in the field of nursing. Therefore, we invite investigators in this field to contribute with different kind of articles that will enhance our continuing to understand and discuss all the aspects of different topics applicable in population of low- and middle-income countries and developed countries.

The journal scope encompasses several important topics including Neonatal intensive care unit (NICU), Pediatric intensive care unit (PICU), Coronary care unit (CCU), Neuro Intensive Care, Emergency and Critical Care, Surgical Critical Care, Pulmonary Critical care, Critical Care Paramedic, Intensive and Critical Care Medicine, Anaesthesia and Intensive Care.

It is extremely heart-breaking that the whole world is generally enduring and looking with a great hope to come out of the grasp of COVID - 19. As coronavirus 2019 (COVID-19) spread across the world, the emergency unit network must get

ready for the difficulties related with this pandemic. The aim of this special issue "Intensive and critical care management of novel corona virus" would be a substantial effort to bring together the current progress on the COVID-19. One of the challenges of the nursing profession is to continuously identify best practices through evidence. The ultimate goal of all nursing interventions is to provide safe quality care.

COVID-19 affects different people in different ways. Common symptoms: dry cough, fever, tiredness

Less common symptoms: sore throat, conjunctivitis, headache, diarrhoea, loss of taste or smell, a rash on skin, or discolouration of fingers or toes, aches and pains,

Serious symptoms: difficulty breathing or shortness of breath, loss of speech or movement, chest pain or pressure.

On average it takes 5–6 days from when someone is infected with the virus for symptoms to show, however it can take up to 14 days.

We encourage all researchers to support our ambitious Journal by submitting their manuscripts through our website. We are looking forward to reading about your latest innovations and granting it access to the public when deserved.

Finally, I hope this epidemic can be brought under control as soon as possible.
