

## Editorial note on Journal of Archives of General Internal Medicine

**Samuel N. Forjuoh**

**Professor of Family & Community Medicine and Health Promotion & Community Health Sciences at Texas, USA.**

Archives of General Internal Medicine, is a peer reviewed scholarly journal that aims for wide dispersal of research advancements regarding the science and practice of internal medicine. The journal aims at the furtherance of biomedical research through the rapid publication of high-quality original research articles, systematic reviews, meta-analyses and technology reports, perspectives on current developments in the field of diagnosis and treatment of diseases prevalent in adults. The journal also publishes manuscripts on research developments pertaining to the pathophysiology of infectious diseases as well as the treatment and management of diseases and physiological conditions such as allergy, asthma and obesity.

The journal is directed to physicians, pathologists, pharmacologist and students that are involved in research and practice of general internal medicine. The journal provides information on novel findings in the field of immunology, endocrinology, gastroenterology, nephrology, pulmonology, cardiology, anesthesiology, gynecology, neurology, psychiatry and radiology.

### **Aims and Scope**

Archives of General Internal Medicine encompass diagnosis and therapeutic approaches of adolescent medicine, critical care medicine, sleep medicine, sports medicine, plastic surgery, addiction medicine and preventive medicine. Manuscripts showcasing recent developments in modern treatment practices including dialysis, bronchoscopy, angioplasty, cardioversion, cardiac ablation, intra-aortic balloon pump and nuclear radiology are solicited. The principal criterion for publication is potential impact on patient care.

The Journal is using Editorial Manager System for online submission of manuscripts, tracking and management of the manuscript processing. All the submitted manuscripts undergo a peer review process under the aegis of an assigned Editor prior to acceptance and publication. To be acceptable for publication, an article should be positively considered by two individual reviewers followed by the Editor's consent.

The archived content of the journal represents the track of progress made in this field over the past year. The information gathered by the journal functions as resource of refined knowledge for academicians, scientists, physicians, clinical and medical professionals. The volume of information contained on the journal web-site is contributed by authors from different regions of the world. Due to these reasons readers hailing from diverse professional backgrounds and regions are interested in the journal content.

With the continuous guidance of our eminent editors we strive to become the best. The role of an editor is not easy; to paraphrase "An editor's role is not a happy one." Every day our editors are faced with making difficult choices about which articles can be published in the journal and contribute to improving research.

We recognize the importance of publication therefore we assess articles on the quality of the research, analysis, data presentation, and writing. All articles must have the approval of the appropriate ethics committee and follow the best research practices.

There are several developments during the decade that have been important trends in publication. The rapid increase in the availability and speed of the Internet and mobile communications has been an important contributor to fast publication. Access has now reached into many of the remotest parts of the world to connect with more researchers. We promote our authors work through regular tweets on twitter, Facebook and LinkedIn.

We thank all of our authors, editorial board members, reviewers, and staff who have made the past decade successful for the journal. In the next decade, we target to improve on the quality and authenticity of the data published in our journal. We dream of quality papers that address pharmaceutical science needs and are written in English to an international standard. Papers can be accepted that are of a high scientific and ethical standard with appropriate statistical analysis. Please work with us to achieve our dream and the publish quality research on current medicine.
