

## Fever is not a Symptom in Covid-19. None of the Diseases Require Fever as its Symptom

Yacob Mathai

Marma Health Centre, Kochi, Kerala, India

### Abstract

We have been hearing for quite a long time that 'fever isn't an infection however a side effect'. Doctors say that fever is a side effect of sicknesses like influenza to cancer. The traditionalist fever definition, finding, and therapies depend on fever as a symptom. All the investigations identified with fever as a manifestation of an illness have been managed without knowing the Purpose of the temperature of fever is. Without knowing the Purpose of the temperature of fever, how might fever remembered for the indication definition? Temperature between 38o to 41o centigrade can be indication of a disease? Most of the infections might not have a fever. Some of the time it vanishes. At that point, is fever an indication of which disease? Symptom Definition is the lone boundary important for a Symptom. Similarly as with any or any remaining definitions, side effect definition ought to depict the indication experimentally. On the off chance that it can't portray obviously, there is no utilization of an indication definition. A side effect is a takeoff from typical capacity or feeling which is seen exclusively by a patient, demonstrating the presence of infection or anomaly. One can't be seen straightforwardly the temperature is raised in the nerve center. A mechanical gadget is important to quantify raised temperature in the nerve center. In indication definition, fever definition can't be found. The rise of internal heat level is excluded from side effect definition.

### Different cause of diseases never shows the same symptoms.

Different causes of diseases like virus, bacteria, fungi, venom, horror scene, horror dream,... never shows the same symptoms. Its actions are different and sometimes opposite. No similarities can be seen between their actions. Elevated temperature or increased temperature never make fever or symptoms of fever. It may create hyperthermia.

### None of the diseases or causes of diseases require fever as its symptom.

If the mosquito bites its virus, bacteria, venom gets deposited in the body as a result according to nature and strength of Viruses, bacteria, venom symptoms like itching, pain, and signals like colour change, inflammation may occur. we can see the symptoms, Signals, and indications of the virus, bacteria, the venom which multiple or spreading or damages(disease) the body before fever emerge. Patients who have flu to cancer may not have a fever.

### How can we separate symptoms of the disease and symptoms of fever and symptoms of rising temperatures?

In fever, the two side effects of sickness and indications of Fever are incorporated. Deduct manifestation of sickness from all out side effects, we will get indications of fever.

(Infection +Fever)- Disease =Fever.

(Indications of sickness +Symptoms of Fever)- Symptoms of infection =Symptoms of Fever (harsh taste, body torment, exhaustion to mind and body, diminished hunger, decreased movement and heartburn, inward and outer uneasiness,... )Like that we can isolate signs, signals, and activities of both fever and illness

(Signs of sickness +Signals of Fever) - Signals of illness

=Signals of Fever(high temperature, shuddering, unconscious,.. )

(Indications of infection +Signs of Fever) - Signs of sickness =Signs of Fever.

(Activities of infection +Actions of Fever) - Actions of sickness =Actions of Fever. In fever doesn't show any activities of temperature rise.

### How can we prove the fever is not a symptom.

The fever isn't manifestation when inspected in different ways. In fever, the two side effects of sickness and manifestations of fever are incorporated. Deduct side effect of illness from complete indications, we will get manifestations of fever. we can isolate signs, signals, and activities of both fever and illness and rising temperature.

Temperature between 38 degrees and 41 degrees can't be a side effect of any of the sicknesses. An alternate reason for sicknesses like infection, microbes, growths, toxin, repulsiveness scene, and loathsomeness dream never shows similar side effects. Fever has never been logically demonstrated as a side effect of a sickness. Fever has the properties of adaptation.If we pose any sort of inquiry identified with fever by accepting that the fever isn't a manifestation we will find an unmistakable solution. On the off chance that we keep away from or dodge from this we won't ever find a legitimate solution to even a solitary inquiry.

## Biography

A practicing physician in the field of healthcare in the state of Kerala in India for the last 30 years and very much interested in basic research. My interest is spread across the fever, inflammation and back pain. I am a writer. I already printed and published nine

books on these subjects. I wrote hundreds of articles in various magazines. After scientific studies, we have developed 8000 affirmative cross checking questions. It can explain all queries related to fever.
