Abstract

Neurologists are medical doctors that diagnose and treat disorders and diseases of the central and peripheral nervous systems. Knowledge of the entire body is critical to these physicians. They treat a wide variety of conditions ranging from mental disorders to coordination problems to problems with the senses. Neurological tests provide these doctors with the necessary information to make diagnoses.

Biography

Chiung-Fang Chang is a researcher at Far Eastern Memorial Hospital, Taiwan. She graduated from National Taiwan University. She received her PhD degree in the Division of Biological Sciences at University of California, San Diego, USA. Her expertise includes immunology, cell biology and animal disease models. Her current research projects focus on the cancer stem cells and immune responses in hepatocellular carcinoma.
