

Latest update in advanced surgical research.

Hazel Smith*

Journal of Advanced Surgical Research, London, United Kingdom

Accepted December 28, 2020

Editorial Note

On behalf of the Board of Journal of Advanced Surgical Research, I am glad to present the Volume 5, Issue 1 of the Journal. It is an open access peer review journal in the field of Surgical Research. Journal of Advanced Surgical Research is having International Standard Serial Number (ISSN) of 2591-7765.

We developed a set of standards and an atmosphere that fosters the prompt delivery of quality reviews with the help of the senior and associate editors. Expedited reviews are one of these policies. Before being forwarded to reviewers, manuscripts are evaluated by the editor-in-chief, senior editor, and associate editor. At any of these stages, the editor may reject the work or return it to the author for revision. This allows for a far faster response to the authors while still preserving reviewing resources for other papers. In the case of urgent revision, writers are given the opportunity to present an improved article to the final reviewers, improving the chances of acceptance. On each manuscript, associate editors provide a brief evaluation for each reviewer. This procedure reminds reviewers that they are accountable for providing timely, high-quality reviews, and it also aids in the identification of prospective associate editor candidates.

Peer review is applied to all scientific articles, including editorials. Members of the editorial board frequently prefer to submit their pieces this way as well. Adv Surg Res, in fact, invites editorial board members to actively participate. However, no one is given any preferential treatment.

The identity of authors and reviewers is not revealed to each other throughout the double blind peer review procedure used by Journal of Advanced Surgical Research. In most cases, two to six topic specialists are involved in the evaluation. The editing team, which consists of associate editors and assistant editors, is involved in the whole article cycle, beginning with submission and ending with final endorsement. The entire review procedure is carefully designed to reduce the risk of bias.

The Journal of Advanced Surgical Research is guided by scientific excellence, publishing ethics, and openness. It makes it simple for writers to submit their papers using the online manuscript submission and review system controlled by the publisher.

The main goals and objectives of this magazine are to publish more and more high-quality research, review, brief comments, mini reviews, case studies, and other pieces that will be extremely beneficial to the readers. We would like to publish more articles related to tissue culture, microscopy, including confocal, molecular biology space/equipment, cellular respiration, small animal and large animal surgery, experimental surgery, innovative surgery, medical ethics, surgical research, etc.

Average download per article is increasing and all these are promising signs. Now we are in this stage only through the continuous support of Editorial Board Members and intellectual generosity of the readers and contributors (authors and reviewers).

With the help of writers, Editorial Board members, reviewers, and readers, the Journal of Advanced Surgical Research has been highly successful with a large number of high-quality papers and will continue to grow. Thank you to all of the reviewers and editors who collaborated and worked hard to make this happen. Adv Surg Res publishes up-to-date, high-quality and original research papers alongside relevant and insightful reviews. This journal is always integrative and challenging with latest updates in surgery.
