

Key issues and challenges of different departments in food processing industries post lockdown.

Sumedha Jalgaonkar

FSSAI (Food Safety and Standard Authorities of India) as master trainer

Abstract:

While lockdown due to COVID 19 will end sooner or later, the ripple effect of the pandemic on industries and lives of the people will last long. The outbreak of COVID 19 pandemic worldwide has created huge impact on lives of people and sustainability of businesses. Each one of us and all kinds of industries must now look at rewriting new rules of life and businesses. The unprecedented halt and the situation in the industries and supply chain has created new challenges to restart the industries. Herewith I have tried to compile some key aspects of concern and challenges, a typical food industry will be facing in order to restart, survive and sustain after lockdown. The key challenges various departments of food processing industry will have to face and overcome to go ahead in post lockdown times. The challenges will be related to all aspect of food businesses like people safety, food safety, food quality, business continuity, sustainability and emergency preparedness.
