The current shortage of Nursing, increase of hospital nurse job dissatisfaction, and uneven quality of hospital care reports are not uniquely American phenomena. This is an explanation of the reports from 43,000 nurses from over 700 hospitals within the united states, Canada, England, Scotland, and Germany in 1998–1999. Nurses in different countries with distinctly different health care systems report similar shortcomings in their work environments and the quality of hospital care. Since the ability of and relation between nurses and physicians are satisfactory, core problems in work design and workforce management threaten the provision of care. Resolving these problems, which are amenable to managerial intervention, is essential to preserving patient safety and care of consistently high quality.
