

Editorial for Clinical and Experimental Toxicology 2020

Editorial Note

Journal of Clinical & Experimental Toxicology (ISSN : 2630-4570) is a peer reviewed scientific publication that offers an open access forum to explore the impact of diversified toxicity on the life including human, animal, aquatic and marine life.

Journal of Clinical & Experimental Toxicology is an interdisciplinary research journal that publishes high-quality original articles, reviews, editorials, and case reports in the field of clinical and experimental toxicology, including forensic toxicology, environmental toxicology, food toxicology, xenobiotics, aquatic toxicology, biotoxins, nanotoxicology, carcinogens, clinical toxicology, veterinary toxicology, toxicology methods and mechanisms, forensic anthropology, microbial toxins, occupational toxicology, systems toxicology, neurotoxicity, ototoxicity, reproductive toxicology, genotoxicity, computational toxicology, and pesticide toxicity.

The journal aims to cater to the diversified needs of veterinary professionals, neurologists, physicians, dietitian, nutritionists, agricultural scientists, gynecologists, career councilors, human resource development professionals and Information Technology specialists. To this extent, the journal accommodate a vast spectrum of topics within the field of clinical and experimental toxicology, including Forensic toxicology, Environmental, Toxicology, Food toxicology, Xenobiotics, Aquatic Toxicology, Biotoxins, Nanotoxicology, Carcinogens, Clinical Toxicology, Veterinary Toxicology, Toxicology Methods and Mechanisms, Forensic anthropology, Microbial Toxins, Occupational toxicology, Systems Toxicology, Neurotoxicity, Ototoxicity, Reproductive Toxicology, Genotoxicity, Computational Toxicology, and Pesticide toxicity The journal constitutes its Editorial-Board comprising scholars from all over the world to explore the toxicology research to strengthen this field of study.
