

Medical Education on Specilization is the keycore to understand and treat patients Better

MD AL HASIBUZZAMAN

Ningbo University School of Medicine, China.

Abstract:

Recently I realize that more people should focus on the education from root level what they want. Because Medical science is like a sea . We need grape a small pice of the field whiche we are the best. So need to more focus on the education system. Now we can see, emergency medicine has lots of scope for Covid 19 and new medical world. The development of specialization in graduate clinical training (GME) and doctor practice proceeds at a quick rate, producing expanding public consideration. In spite of the fact that the major instructive, authorizing, and confirming bodies have components for supporting new territories of study and practice, the consequences of their endeavors have not been reliably harmonious. This article presents data about GME since the beginnings of its normalization and accreditation in the mid twentieth century, its development during and following World War II, and the varieties among authorize fortes and subspecialties, endorsements, and self-assigned practice regions that have come about because of this significant stretch of unstructured development.

Biography:

I am doning my MBBS and I am in my final year in Ningbo University School of Medicine. I want to do PhD and so I am doing research on COVID-19 and Neurology. I am intersted to work in those field of medicine.
