

Nucleopathy a New Dimension of Proper Diagnoses & Treatment

Shahid H Sheikh

NIDS Treatment & Research Center, Pakistan

Abstract

The conventional allopathy over the centuries has made numerous advancements in timely protection of human life. Defining certain boundaries of the diagnoses & treatment of the ailing human body have only drawn a guideline to limit the scope of treatment and care generally symptomatic in nature. Therefore, the quest of investigation into the etiology of the ailments left muffled to extend the possible cure. It has limited the healthcare arena worldwide to the cytopathology at the end, as the cell a basic unit of any system of the human body. In today's world, many diseases are treated symptomatically; not knowing the full etiology. This opens up a new door in this era of technological advancement to further into the nucleus of the basic controlling cells of the system and ultimately create a better understanding of the pathoneogenesis. Atomic Force Microscopy has given a new meanings to the scientific revelation, the Nano Biology, The 1 billion times magnification than its own size. Many scientist deployed and unraveled the secrets of ever growing nano pathologies contributing to the chronic diseases that are known in today's world as incurable. Therefore, the symptomatic treatment fail to entertain the permanent growth of the nano pathologies undermining the homeostasis of the full function of the suffering system. Nucleopathy is indeed the beginning point of the "primary Disease" must be entertained for a curative treatment to give back the quality of life to the ailing humanity

Biography

Shahid Hussain Sheikh, M.D., Ph.D. Neurology. He served in various medical research positions at the Univ. of WA Med. Cntr. from 1982 to 1992. Asso. Prof. of clinical Physiology at the American College of Prof. Edu. and Med. Cntr, as a Research Scientist/ faculty in the clinical Research. Since 2004, pioneered unveiling the secrets of Nucleopathy, instigated by the Neuro-invasive viral genomic proliferation of the functional Neurons by furthering the AFM based nano biological research of Dr. Edward Wagoner group at UCI. The "Sheikh's Syndrome" defined in 2006 having established the pathophysiology of many diseases emerging from the nuclei of the infected neurons, have substantiated the term Nucleopathy. Prof Sheikh has successfully found the viral link and cured the IBS, Rheumatoid Arthritis, Hypertension, and 48 other diseases. He is the world's leading researcher that has now established a possibility of a better quality of life for all.
