

## Police's Mental Health - Review study

**Om Kant Sharma**

Forensic Psychologist, Arka Forensic Attorneys, New Delhi

### Abstract

In world un every country police perform a important part to implement & sustain the law in every society. they has a responsibility to maintainance the order and peace in the society, and our country india is democratic country, so here Three pillars of any government are executive, legislature and judiciary and also fourth is Media. But we are focusing on police comes in legislature piller. I think police play importent role between nation civiliances and government, and during their work or duty they face lot of stress from the govt side or public side. It effect on their mental health(stress, anxiety, depression, emotional tie, life satisfaction, loss of behaviour or emotional control, general positive effeccts). in this review study, I will try to founs and discuss on their mental health aspect.

### Biography:

Om Kant Sharma ,Diploma in Python, data analysis, Machine Learning & Artificial Intelligence Data Science2021 - 2021Data analytics focuses on the examination of data sets to identify and explain trends.Data science looks more at the processes for data modelling and production, creating algorithms and predictive models.AI is the ability to give computers the ability to replicate human intelligence. Artificial Intelligence systems have three qualities; intentionality, intelligence, and adaptability. These qualities give them the ability to make decisions that traditionally require a human level of experience and expertise. Machine Learning is a subset of AI whereby computers are programmed to learn automatically that act in a similar way to humans, improving their learning as they encounter additional data, the focus of machine learning is to create programs and software that can learn to make predictions and decisions without being directly programmed to do so, can be used for all kinds of purposes, like powering search engines to diagnosing medical conditions.
