

## Progress and impact of AAPHPP.

Mohammed Kuddus\*

Department of Basic Medical Sciences, College of Medicine, University of Hail, Hail, Kingdom of Saudi Arabia

Accepted on April 15, 2020

### Editorial Note

**Journal of Public Health Policy and Planning** expresses sincere gratitude to all its elite panel of editorial board members for their continuous efforts, valuable support and encouragement throughout the publication journey of the journal, right from its inception in the year 2017 and congratulates them for making the journal publish quality of research and becoming one of the leading and well-recognized broadcaster of scientific outcomes in the field of public health, global health policy planning and implementation research.

The objective of JPHPP is to publish high-quality original research papers, survey reports, case studies, narratives, review articles, short communications, clinical data, epidemiologic studies, thesis and relevant and insightful reviews. Every year we published with different volumes and different issues. Each issue of the journal covered with different types of topics in the field of public health issues, health policies, health economics, health care management, mental health, evidence based medicine, primary care and health care. All published papers are subject to the journal's double-blind review process. The topics for the 2019 year were varied and exciting. The biggest category was probably community health, including nurse education, primary care, public health care, but there is so much more involving scientists as academicians and young researchers. The current volume of the journal is 4 with issue 1.

We believe your contribution will enhance the worth of the issue in 2020 in the field of public health care research including infectious diseases, health management, preventive medicine, new health manpower, analysis of environmental factors, delivery of health care services, study of health maintenance and health insurance programs, health economics, public health, epidemiology, fundamentals of nursing and community health care.

The journal's classifications are health management, health economics, health equity, diagnosis and treatment of infectious diseases, applied epidemiology, global health policy, public

health policy, mental health policy, health care services policy, insurance policy, personal healthcare policy, pharmaceutical policy, and policies related to public health such as vaccination policy, tobacco control policy and health equity.

The social media can play a key role in spreading the research works with increased visibility, citation and ultimately the impact of published works. We promote published articles to the social media. This will benefit the researcher to increase reputation and attendant career progression. For example, the Facebook account, Twitter, LinkedIn and Instagram.

According to the Google Analytics, more than 7,415 readers are visiting to our journal websites for submitting manuscripts, to browse the latest research published on public health and health issues and to refer the published content for conceptualizing their research study, deriving research hypotheses, case reports and validating their contributions. Readers from the major countries including United States, Japan, United Kingdom, India, Egypt and Nigeria visit our journal domain to learn about the ongoing research activities in this field.

On behalf of the Allied Academies Publishing and JPHPP Editorial Board and the whole Editorial Office, I would like to express our gratefulness to the authors of articles published during the past years, and to acknowledge generous help, which both the authors and editors obtained from the peer-reviewers.

Our aspiration is to facilitate scientific discovery in new ways by exploring new technologies in the field of health economics, health policy and health care.
