

## Recent trends in pain management and therapy.

**Farnad Imani**

Department of Anesthesiology and Pain Medicine, Iran University of Medical Sciences, Tehran, Iran.

*Accepted April 14, 2020*

I am delighted to announce that the Pain Management and Therapy (AAPMT) is a new journal that gives me the opportunity to present the journal's accomplishments in 2019.

Pain Management and Therapy is an open access journal whose main purpose is to provide the most important and authoritative source of information on current pain management and therapy trends and discoveries. Pain can be any form of mild, moderate or extreme, according to which either non-steroidal anti-inflammatory drugs or strong opioids can be used to treat it. Pain management can be described as the vital part of medicine, the aim of which is to provide patients with ease and chronic pain relief through interdisciplinary approaches including physiotherapy, medication, psychology and other therapies. AAPMT has published all the issue at the given time and preprint were also published and dispatched within 30 days of the publication of the article online.

AAPMT accepts manuscripts of all forms such as research papers, case reports, review reports, short commentary, mini review etc. The objective of this journal is to share and deliver content work done by researchers and scholars in the field of pain management and its treatment using many types of therapy. AAPMT is the high impact journal; and indexing is under development by different indexing agencies. AAPMT has published 2 research articles and 1 commentary in issue 1 and issue 2 contains 1 research article, 1 short commentary, and 1 young research Forum all issues comes under volume 3.

AAPMT also submitted a total of 17 papers from the year 2017 to 2019. All the 7 articles submitted to this journal went through a peer review process some of them are subject to revision and the remaining papers are accepted and released for further processing. The time taken for an article to be published is even less the article should be published within 7 days of editors approving it.

In the preliminary screening several papers were dismissed due to plagiarism or being out of style. Some of them are updated and the remaining papers have been subjected to the peer review process and are accepted for further processing. This journal's additional advantage is that the editors are the sole decision. Review process and method of peer review conducted within a given time frame. If in the peer review process any manuscript is not approved, the author is given another chance to change the manuscript. Journal uses online broadcasting and multiple social media channels such as Twitter, Linked In, and Facebook for recent updates about what's going on in the newspaper to make people aware of the trend-setting topics of AAPMT. I would like to acknowledge the contribution of all reviewers, and other supporting peoples during the final editing of the published articles and the help provided by the editorial assistants in bringing out AAPMT issues in time. I am very thankful to them for giving me this opportunity to appreciate the work and other peoples for making this journal successful.
