

Young Research Forum-Young Scientist Award on Materials Science and Engineering

Ivan Bozovic,

MBE Group Leader, Materials Science, Brookhaven National Laboratory, USA, Email: bozovic@bnl.gov

[Material Science 2020 Young Researchers Forum](#), which is slated to hold from **May 04-05, 2020** at the **Golden City Prague** located in Czech Republic, offers young researchers the possibility to meet and discuss scientific research topics and techniques, develop and share ideas, learn from each other and gain knowledge from eminent and experienced senior researchers and mentors.

The main aim of the Young Researchers Forum is to inspire and bring together young researchers in the field of [Materials Science](#) and Engineering. The YRF offers a vibrant place for discussing potential and on-going research in any stage, from idea to results. The forum strives to offer a friendly environment to allow young researchers to receive feedback on their work, share experience, explore pathways open to them and ask questions.

Participation is open to anyone who considers herself / himself a 'young' researcher (**below the age of 33 years**), wanting to exchange research ideas in the field of Materials, Metallurgy, Photonics, Optoelectronics, Magnetic, [Nanomaterial's](#), Polymers, Composites, Engineering and results with their peers and awaiting for the moment to inspire and be inspired and learn about the research paths. PhD candidates, Postdoctoral researchers, young researchers in any period of their research including undergraduate students, young researchers in industry research pathways are all most welcomed to attend.

Not everyone attending the Young Researchers Forum is required to present their work. Also, the YRF is open to Delegates through which you can enjoy hearing about exciting research from our speakers, view poster presentations, and participate in interesting discussions and talks on career mentoring and much more.

Young Researchers from universities, institutes, and various industries are invited to present oral or poster presentation during these forums, emphasizing goals and what they intend to achieve moving forward. Through the Young Researchers Forum, Material Science 2020 identifies and backs some of the best young researchers in the materials science and engineering field.

The [Young Researcher Award](#) is an initiative with the aim of inspiring seed stage researchers to combine a dimension and perspective into their research, supporting young researchers, students in their quest to advance the frontiers of Materials Science. The Young Researchers' Award is granted by Material Science 2020 to researchers demonstrating brilliance in their research contributions of Materials, Nanomaterial's, [Biomaterials](#), Metallurgy and leadership.

The award winning papers will be considered for publication in the Allied Academies Publishing Group journals after the standard review procedures.

Researchers applying for the Material Science 2020 Young Researcher Award should send a letter of recommendation from a senior faculty member or their research advisor along with their resume to materialscience@alliedgather.com along with the submission of their abstract at <https://materialscience.alliedacademies.com/young-researchers-forum>

[Prague Material Science 2020 Conference](#) is thrilled to welcome all young professionals to take center stage at our global scientific event. When you're through exercising your intellect at our ground breaking Material Science Conference, you can take some time to enjoy the wide range of Prague sights.

With Best Regards,

Helen Thomas-Program Manager
