## Erfried Pichler

*Klinikum Klagenfurt, Austria*

### Optional treatment with homeopathy for children suffering from Cancer

Homeopathy is medicine for the individual person. In my lecture I present the treatment of a young boy and a young girl. She was suffering from Burkitt's lymphoma with her ups and downs and in the end with a satisfying outcome. The boy got aggressive during chemotherapy. A homeopathic remedy was able to calm him down during the following chemotherapies. Homeopathic medicine is used in addition to conventional medicine.

Usually we treat patients by choosing a homeopathic remedy as a result of a complete anamnesis which include patient's biography, the current complaints and the psychic and physic possibilities of reactions on daily life. During follow-ups we can clearly evaluate the efficacy of our treatment. In this presentation the suffering of a five-year old girl with a B-Non-Hodgkin Burkitt like Lymphoma will be described. The first consultation via phone was during her stay at the Intensive Care Unit because of an organic shock syndrome. Getting Phosphor and Mercurius corrosivus in homeopathic preparation extubation was

possible within one day. Conventional treatment combined with homeopathic remedies was completed five months later. Some months later she got a relapse and a stem cell therapy was necessary. Severe fever attacks, abdominal pains, loss of appetite and psychic disorders could be cured by homeopathic drugs. Main remedies had been Phosphor, Scropholaria nodosa, Acidum arsenicosum. That form of Integrative Medicine enabled her survival. This case encourages us to treat patients in our practice or hospitals. The efficacy of homeopathy is also seen in calming of a young boy who got angry during chemotherapy delivering him Strychnos nux vomica.

#### Speaker Biography
