## SHOULD WE BE HONEST AND TELL PARENT “VACCINES ARE BAD”

The Aim of this abstract is to equip the doctors with the correct information to help the parent make an informed decision to vaccinate their children. The presentation is aimed to explain to doctors the possible side effects of vaccine. To correct the common misunderstanding of the parents that vaccines are introduced just for the profit of the pharmaceutical companies and have no medical purpose. By giving a highlight of the diseases covered by the vaccines, doctors and parent gain perspective on the need for vaccine. By giving the parents the correct information and knowing the side effects of the vaccine, the doctors can explain better the logic of vaccinating children despite the possible harm that can arise from it.

Note:
