

SPRING DERMATOLOGY & SKIN CARE EXPO CONFERENCE

May 14-15, 2018 | Montreal, Canada

Clarissa Prati

Brazilian Society of Dermatology, Brazil

Advanced use of hyaluronic acid fillers for the facial anti-aging approach

The cellular and anatomical changes, as time goes by, result in an important and progressive loss of soft tissue volume in the face, with wrinkles and sagging skin. In this context, dermal fillers were an amazing discover and hyaluronic acid-based (HA) products are the most popular, non-permanent injectable materials, which is available for the treatment of ageing skin. For the last years, the techniques have been substantially updated, with facial anatomy and technique proportions taken in deep consideration to best use HA to restore lost volume, sculpt the face, and improve overall facial harmony in an accurate manner

for each patient needs.
