Cardiovascular disease and its prevention

Purusharth Kumar Sharma

Rajasthan University, India

This is a condition which affects our heart. There are many types such as heart attack, heart failure, CAD, aortic disease, and many more. There are many other ways through which we can prevent this. So my research work is on that how we can manage these fatal diseases at their early stages so we can prevent the death of a patient or some ways to manage

this disease and I think these ways are very helpful to people and some techniques which a person can do at their level. It helps them get heart attack and some medicine which has less side effect and more response.
