STEM CELLS FOR AESTHETIC AND THERAPEUTIC USE

What is Stem cell? The truth and the myth behind the stem cells therapy

What is Self-renewal and differentiation?

Types of Stem cells

Different Sources of stem cells

Functions of stem cells and understand the cellular processes

Characterization of MSC

Challenges and limitations of Stem cells therapy and possible solutions.

1. Selection of stem cells
2. Identify to culture or not to culture
3. Stem cells integration with host
4. Immunological rejection?
5. Autologous or Allogenic?
6. Pluripotency
7. To differentiate or not to differentiate
8. Secretomes, exosomes and trans differentiation
9. Will it stimulate cancer?

Why do it?

What is the aesthetic and therapeutic result that my teams have achieved?

POLYDIXANONE THREADS IN ANDROGENETIC ALOPECIA: A NOVEL INNOVATION

Polydioxanone (PDO) threads have become an emerging trend for facial rejuvenation. The entire basis of the thread lift technique is the foreign body cutaneous response to the presence of threads within the skin. Androgenetic alopecia may result in disturbed self-perception and psychosocial interaction. Various treatment modalities like oral finasteride, topical minoxidil and platelet rich plasma have been tried with good therapeutic benefit. Herein we determine the efficacy & safety of polydioxanone threads in five patients suffering from hair loss due to androgenetic alopecia and not responding to 6 months therapy with minoxidil and finasteride.
