Eosinophilic Granuloma/Langerhans Cell Histiocytosis: Pediatric Neurosurgery

Motahareh Vamegh¹ and Samer Karkout²

¹McGill University, Montreal, Canada

²Al Qassimi Hospital, Sharjah, UAE

We report a case of Langerhans cell histiocytosis in a 20 months old child which was first misdiagnosed as a case of infective etiology and received several courses of antibiotics with no avail. Eventually he was referred to Neurosurgery department and CT showed a soft tissue

mass eroding the temporal bone which was managed surgically and histopathology reported as Langerhans cell histiocytosis.
