IRREVERSIBLE LOSS OF FIBROMYALGIA STUDENT'S LESSONS LEARNT FROM ONGOING COUNSELING DURING FOLLOW-UP PHARMACY INSTITUTIONS IN INDIA

Rahul Hajare

Indian Council of Medical Research, India

Fibromyalgia have one of the leading causes of neurological disorders and stroke in pharmaceutical institutions. Health has the ability of a biological system convert into personal satisfaction. The World Health Organization (WHO) literature for human health in a broader sense in its 1948 constitution as "A state of complete physical and well-being and not merely the absence of disease or infirmity. It has been subject to controversy, in particular as poor transportation facility in pharmacy institution lacking operational value, the ambiguity in developing low health strategies and because of the problem created by use of the word "Social determinants of health", which makes it practically impossible to achieve healthy environments. Understanding student health and disease with private based co-educational pharmaceutical institution has not transportation facility and low quality food in suburban areas of developing cities in India cannot ignore. Early decompressive adrenal insufficiency has accepted in medical science due to health imbalance. Fibromyalgia especially from junior students to senior students living with private institution with poor quality of life and facility can translate into permanent disability in the world. They cannot compare Fibromyalgia with joint pain. Fibromyalgia cannot ignore because it has weak immunity has unfortunately not measured in the above series.
