

Trans abdominal sonography of the Gall Bladder and its hepatic and peritoneal perforations

Vikas Leelavati Balasaheb Jadhav

D Y Patil University, India

Trans Abdominal Sonography of the Gall Bladder can reveal Hepatic & Extra Hepatic & Peritoneal Perforations of the Gall Bladder, whether it is impending perforations, frank perforations, sealed perforations, concealed perforations & its complications. It can also demonstrate adhesions in the Gall Bladder Fossa at the Right Upper Quadrant. All these cases are compared & proved with gold standards like Laparoscopic &

Open surgery & endoscopy. Some extra efforts taken during all routine or emergent ultrasonography examinations can be an effective non-invasive method to diagnose primarily hitherto unsuspected Gall Bladder impending perforations, frank perforations, sealed perforations, concealed perforations & its complications, so should be the investigation of choice.
