Ayurveda management of alcoholic liver disease

Incidence of Liver disorders is increasing day by day in India as well as in the whole world. Chronic alcohol consumption will lead to diseases of multiple organs. Alcoholic liver disease is such a disorder which occurs due to chronic ingestion of alcohol. It is of three stages.

1. Alcoholic stenosis or fatty degeneration of the liver
2. Alcoholic hepatitis
3. Alcoholic Cirrhosis

Ayurveda medicine is effective in ALD. Use of disease specific Ayurveda medicines, practice of pathyapathya, diet therapy, panchkarma, counseling and practices of yoga and pranayama are beneficial in the management of ALD. Hepatoprotective hepatic stimulant, choalagauge, Rasayana, balya, brimhana, poshaka, nutritive, ojaskara and vayasthapana drugs is helpful in the management of ALD. Drugs like Arogyavardhini

vati, Phalatrikadi Kashaya, pravala panchamrita Rasa, mukta panchamrita Rasa, Kamadugha Rasa, kharjuradi Mantha, katuki kashaya, triphala tablets, pravala pishti, mukta pishti, pravala bhasma, mukta bhasma and guduchi kashaya are useful in this disease.

The present paper highlights about the Ayurveda management of Alcoholic liver disease.

Key words: Alcoholic liver disease, Rasayana, Ayurveda.

Speaker Biography

Shripathi Acharya G is working as a Director (Academic), Department of PG Studies and Professor and HOD of PG and PhD department of Kayachikitsa, Muniyal Institute of Ayurveda Medical Science, Manipal. He worked as an Observer in RGUHS examination twice at COPS Manipal and Squad Chief, once at St John's Medical College, Bangalore.

A non-randomized controlled trial for reducing postpartum depression in low income minority women at community based women's health clinics

Objective: To analyze an intervention that delivered tailored clinic-staff training on postpartum depression (PPD), followed by awareness-raising and social support among low-income minority Bedouin women in southern Israel aimed at lowering PPD.

Methods: We conducted a non-randomized controlled trial at two women's healthcare clinics. The study included 332 of the 384 eligible women recruited at baseline (intervention = 169, control = 163), who completed two face-to-face interviews, one at 26–38 weeks of pregnancy (Time 1) and one 2–4 months postpartum (Time 2). PPD was measured by the Edinburgh Postnatal Depression Scale (EPDS) and dichotomized using a ≥ 10 score cutoff. We calculated EPDS change (rate difference of dichotomous EPDS from Time 1 to Time 2) (no change, positive change, or negative change), and compared EPDS changes in a control clinic (usual care) vs. an intervention clinic (individual and group sessions).

Results: The intervention group showed a greater decrease in dichotomous EPDS ≥ 10 between Times 1 and 2 (38.5% to 17.2%) than the control group (31.9% to 29.4%, PV =

0.008). Multinomial logistic regression showed that high PPD awareness significantly contributed to positive EPDS change in the intervention group (PV = 0.003) and high social support significantly protected against negative EPDS change in both groups (intervention (PV = 0.001) and control (PV = 0.003)).

Conclusions: In low-income women, an intervention focusing on increasing PPD awareness and social support following clinic-staff training was associated with reduced EPDS and positive EPDS change following the intervention. Similar interventions should be implemented in women's clinics during pregnancy.

Keywords: Postpartum Depression, Low-Income Minority Women, Non-Randomized Control Trial, Intervention, Bedouin Women.

Energy alterations in patients that manifests rectum cancer after covid-19 infection

Introduction: There are studies in the literature saying about the difficulties in patients with colorectal to seek help during covid-19 pandemic.

Purpose: the purpose of this study is to demonstrate that patients that is acquiring covid-19 are having energy deficiencies in the five internal massive organs, that is the same energy imbalances that is generating any kind of cancer, according to traditional Chinese medicine's reasoning. In this case reported in this article, I will demonstrate which are the energy alterations in patient that has colon cancer after covid-19 infection treatment.

Methods: through one case report of a 53 -years- old male patient, he is a military retired in Brazil, he contracted covid-19 in December 2021 and was treated with highly concentrated medications (such as antibiotics and anti-inflammatory medications) and in January 2022, he started to feel pain in the abdomen and after exams, they discovered that he has colon malignant cancer. He went to my clinic to treat his energy condition (because his wife is my patient also) and I measured his internal massive organ energy using a crystal-pendulum.

Results: I discovered that all his internal massive organs (Liver, Heart, Spleen, Lung and Kidney) were in the lowest level of energy (rated one out eight). It was orientated him to avoid some groups of foods (according to Chinese dietary counseling), and he started the treatment with auricular acupuncture with apex ear bloodletting and systemic acupuncture (to regulate the Yin, Yang, Qi and Blood energy and treat his pain condition of the rectum and replenish his internal five massive organs using highly diluted medications according to the theory Constitutional Homeopathy of the

Five Elements Based on Traditional Chinese Medicine and crystal-based medications). Conclusion: the conclusion of this study is to demonstrate that patient that developed cancer post covid-19 infection has energy alterations inside the five internal massive organs and the infection itself was not the direct cause for the cancer manifestation. The patient had the same energy deficiency predisposition to have both conditions but to have cancer, there is the necessity of having about 10 to 15 years of energy deficiency to develop a malignancy in the rectum. So, the infection process could trigger some energy alterations facilitating the beginning of symptoms of cancer (that could be previously installed prior to the infection and the symptoms appeared only after the treatment done (usually using highly concentrated medications) because these medications can reduce even more this vital energy and have more propensity to have any kinds of disease such as diabetes, hypertension, myocardial infarction, strokes or even cancer in any part of the body).

Speaker Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist. Once in charge of the Hospital Infection Control Service of the City of Franca's General Hospital, she was responsible for the control of all prescribed antimicrobial medication and received an award for the best paper presented at the Brazilian Hospital Infection Control Congress in 1998. Since 1997, she works with the approach and treatment of all chronic diseases in a holistic way, with treatment guided through the teachings of Traditional Chinese Medicine and Hippocrates. Researcher in the University of São Paulo, in the Ophthalmology department from 2012 to 2013. Author of the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine.
