### Description

Quest Diagnostics (NYSE DGX), the world's leading provider of individual information services, blazoned moment that it has acquired the toxicology and clinical laboratory business of medical Centre driver Concentra, a attachment of HumanaInc. (NYSE HUM). In addition, Quest Diagnostics has entered into the long-term agreement with Concentra to be its main primary provider of plant medicine toxicology and clinical laboratory testing. his is Quest Diagnostics 'third advertisement regarding an accession of a laboratory business in 2013. In April, Quest Diagnostics blazoned plans to acquire the lab- related clinical outreach operations of Dignity Health in California and Nevada. In January, the company completed the accession of the clinical and anatomic-pathology out reach laboratory bussiness of Massachusetts-grounded UMass Memorial Medical center.

Novavax, Inc. (Nasdaq NVAX) reported moment that results from apre-clinical toxicology study of its vaccine seeker to help respiratory syncytial contagion (RSV), showed the vaccine to be safe and well- permitted at all boluses tested. Novavax's vaccine uses largely purified recombinant patches of RSV-F emulsion (RSV-F) protein typically plant in the contagion. There's presently no approved vaccine to help RSV infection.

In former beast studies, Novavax's vaccine seeker was well permitted and defended against challenge with live RSV. In this safety study, rabbits were immunized with a placebo or the RSV-F vaccine at a cure of 3 or 30 micrograms with or without an aluminum phosphate adjuvant to boost immunogenicity.

### Toxicology

Waters Corporation (NYSE WAT) is showcasing its portfolio of MassTrak™ results at the American Association of Clinical Chemistry periodic meeting and Clinical Lab Expo July 25-29, 2010 in Anaheim in exhibition cell# 4447. Waters portfolio of MassTrak Results for the clinical laboratory combines the power of separations wisdom, tandem mass spectrometry, specialized chemistries, software, and support services in ways designed to optimize laboratory processes. Waters MassTrak Results dock reversal times and increase perceptivity,

particularity and inflexibility of assays for remedial medicine monitoring, toxicology, and endocrinology when compared to traditional tests styles.

This time's AACC conference features further than 27 donations on operations for LC/ MS including a bill being presented by Waters scientists in collaboration with clinical scientists at Newcastle Hospital, United Kingdom on Tuesday, July 27. Operations for liquid chromatography and tandem mass spectrometry for the clinical laboratory are growing largely due to advancements in delicacy and perfection, speed of analysis, and ease of use.

Welichem BiotechInc. (the" Company") (TSX-V WBI) announces the form with Health Canada of a clinical trial operation for its lead, anti-inflammatory medicine WBI-1001. The operation is for a 3-month, double dazed clinical trial in cases with habitual atopic dermatitis at three trial centres. This form is a direct result of the successful completion of the long-term, IND- enabling toxicology studies blazoned April, 2009. Results of these long- term toxicology studies support fresh, longer term clinical trials of WBI-1001.

"We're veritably encouraged by the data on thisnon-steroidal,anti-inflammatory medicine seeker," said Dr. Genhui Chen, Chief Executive Officer. "This operation is a significant step forward in our medicine development program." Subject to nonsupervisory blessing of this operation, Welichem plans to initiate the clinical studies in Canada in the fall of 2009.

As it builds on the successfully completed clinical trials and safety studies of WBI-1001 Welichem's plans for the transnational phase II/ III clinical program are now progressing well.
