Cancer Nursing Congress 2020 will highlight the latest discoveries across the spectrum of cancer research experimental therapeutics, molecular targeted therapies, molecular biology and genetics, immunology and immunotherapy, tumor biology, virology, toxicology, prevention, survivorship and advocacy and share the recent work of the best minds in research and clinical medicine from institutions of US, Europe and Asia.

Cancer is the name given to a gathering of related diseases. In a wide range of malignant growth, a portion of the body's cells start to isolate ceaselessly and spread into surrounding tissues. Malignant growth can begin anyplace in the human body, which is comprised of trillions of cells. Regularly, human cells develop and gap to shape new cells as the body needs them. At the point when cells develop old or become harmed, they pass on, and new cells have their spot.

When cancer develops, however, this orderly process breaks down. As cells become more and more abnormal, old or damaged cells survive when they should die, and new cells form when they are not needed. These extra cells can divide without stopping and may form growths called tumors.

Cancer cells differ from normal cells in many ways that allow them to grow out of control and become invasive. One important difference is that malignant growth cells are less specialized than normal cells. That is, whereas normal cells mature into very distinct cell types with specific functions, cancer cells do not. This is one reason that, unlike normal cells, cancer cells continue to divide without stopping.

Hosted by Allied Academies and generous response was obtained from editorial board members of our supporting journals as well as from eminent Food Science researcher and young student community. The Conference was initiated with a warm opening ceremony video. The proceedings went through interactive panel discussion and sessions which was headed by Honourable Moderator from India for the Conference. Food Science 2019 played an important role in promoting multidisciplinary interactions between Nutrition and Health to enhance research in Food Science. The program covered current and emerging research innovations in the field of Food Science

We are obliged to the various delegates from companies and institutes who actively took part in the discussions. We thank everyone the organizing committee members and editorial board of Food technology 2019 for their gracious presence and continuous support throughout the proceeding of the conference.

Determined thirst for learning is component in structuring, emerging and successful career, increase your learning and gaining potential by getting the subject deep established by attending Food Science & Technology conference to coordinate with your companions, trade aptitude and encounters, arm yourself with the most recent data to take your speciality to the

succeeding level.

It's an honor to invite all concerned individual to come to go along with us at our occasion and make it fruitful by your support. Food Technology 2020 will probably deliver an extraordinary program that screens the whole range of advancements and current research in food science and technology which offer the culturally diverse encounters of assorted techniques.
